

# Physician Assistant Direct Health Care Experience Verification Form

## Instructions

Please complete this form to verify that you have the required 470 hours of direct patient care.

The best type of medical experience is direct patient care. Such experience involves hands-on care of patients as in positions such as nurse, nurse aid, EMT/paramedic, PT, PTA, OT, OTA, medical assistant, or CNA. In general, positions which have patient contact but are not considered as caring directly for the patient may include phlebotomist, medical technologist, transportation aide, radiology technicians, dietary aide, etc.

If employment in an above field is impractical for you, volunteering for a hospital, nursing home, rehabilitation center, or doctor's office would suffice. When volunteering, it is important that you are able to observe or participate in direct patient care.

**A letter on official office stationery from your employer or volunteer office must be submitted with this form.**
